MAJOR OPERATING CONTROLS AND CONNECTORS

1. Camera Selection Switch (CAMERA, 1/2/3/4/5/6/7/8)

These switches are used to choose the camera signal.

Notes :

- When the camera signal is switched by this switcher, switching noise will be occurred.
- Be sure to press only one switch at one time.

2. Video Output Connector (VIDEO OUT)

This is a BNC type connector.

The video signal selected by the Camera Selection Switch is output from this connector.

Note :

The ground of the video signal is isolated from the chassis.

3. Video Return Connector (VIDEO RETURN)

This is a BNC type connector.

The loop-through video signal of the Video Output Connector will be returned to this connector.

Note :

The ground of the video signal is isolated from the chassis.

4. Camera Input Connector (CAMERA IN)

The camera signal should be supplied to this connector.

Note :

The ground of the video signal is isolated from the chassis.

5. Camera Output Connector (CAMERA OUT)

The camera signal is output from this connector.

When the cable is not connected to this connector, this connector is terminated with 75 ohms automatically.

Note :

The ground of the video signal is isolated from the chassis.

BLOCK DIAGRAM

The loop-through output of the selected channel is not available unless the video return signal can not be obtained.

SYSTEM CONNECTION
